

ART GALLERY WEB PROJECT

ABSTRACT

The Art Gallery Web Project is an online platform designed to showcase and sell artworks from various artists. This system provides a digital marketplace where artists can upload their artworks, and customers can browse, purchase, and interact with the collection. The project aims to bridge the gap between artists and art lovers globally, eliminating geographical constraints and making art more accessible.

This web-based system offers user-friendly navigation and an efficient admin dashboard to manage artworks and users. Artists can register, upload their works, and track sales.

EXISTING SYSTEM

Manual Art Showcase: Artworks are displayed in physical galleries, limiting accessibility.

Limited Audience: Only local visitors can view or purchase artworks.

No Online Sales: Buyers must visit the gallery physically for purchases.

Difficult Artist Promotion: Artists struggle to promote their work without a digital platform.

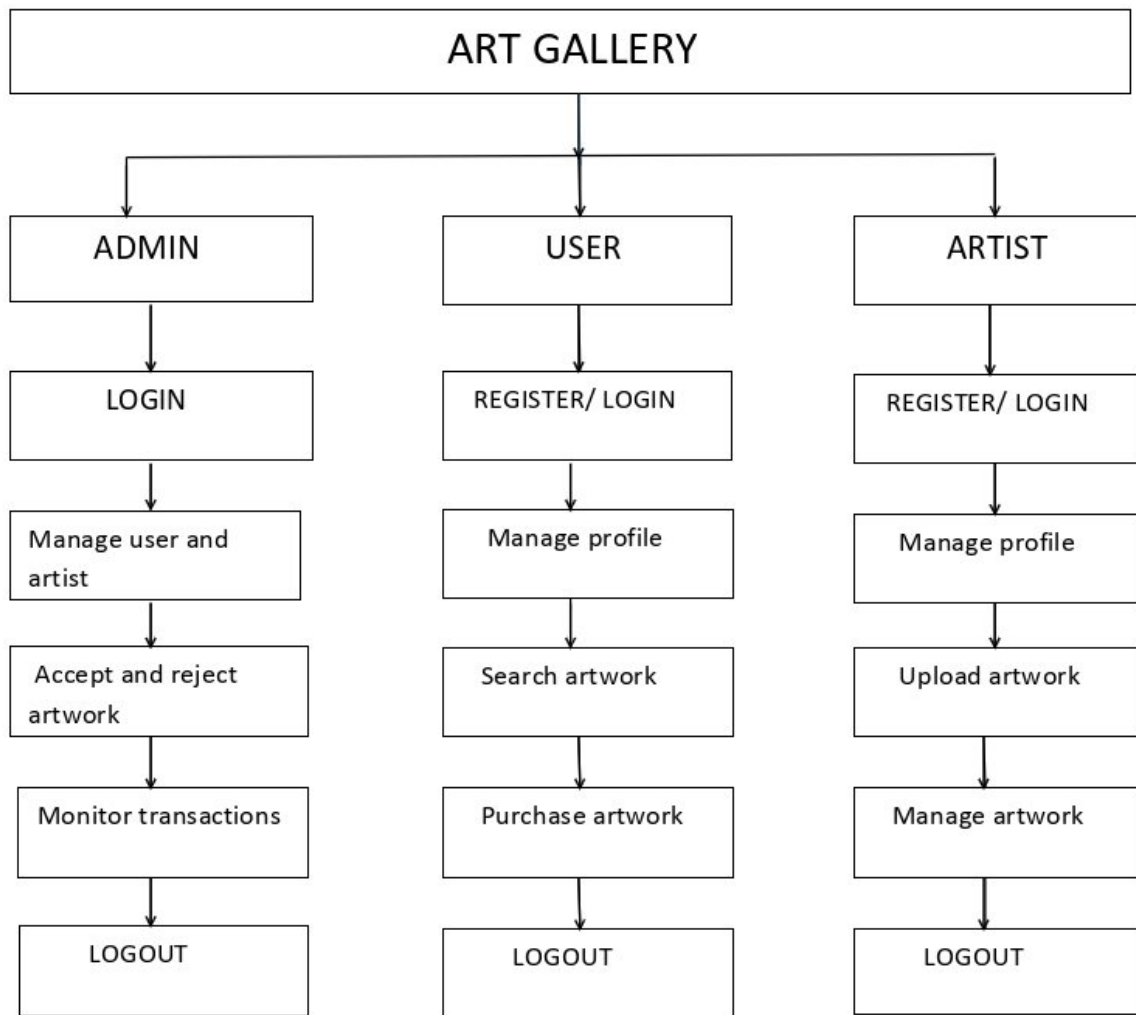

PROPOSED SYSTEM

Digital Art Showcase: Artworks are displayed online with high-quality images and details.

Global Reach: Users from anywhere can browse, buy, and explore art.

Artist Promotion: Artists can create profiles, upload artwork, and gain recognition.

FLOW OF DATA

PROJECT STRUCTURE

1. Frontend (User Interface)

- Build the website's layout and design using HTML, CSS, and JavaScript.
- Ensure the site is responsive and user-friendly on both desktop and mobile devices.

2. Backend (Server-Side Logic)

- Develop server-side functionality using Python.
- Handle user authentication, order management.

3. Database Management

- Design and manage the MySQL database.
- Create tables for products, users, Artist and other essential data.

TASK DISTRIBUTION FOR 4 MEMBERS

Meenakshi R

- Front-end development : Home page, Login page, About page , etc
- Implement responsive design
- Integrate API calls to fetch data from backend

Rowza Mol S

- Implement authentication
- Handle form validation and user input
- Perform Testing

Annlin MS

- Develop server-side logic
- Set up and manage database
- Data validation and error handling

Thasleema NR

- Integrate Razorpay for secure transaction
- Admin dashboard
